

[Recycling App]

Recycle damaged or used materials

Purpose

Environmental pollution is increasing day by day due to waste resulting from personal consumption, whether from restaurants or homes that leave behind plastic, metal or glass containers, as well as used oils that are not edible, and because of that, public health has deteriorated. To solve this problem, our project idea is to recycle products that are recyclable and replace them with other products Other usable

Expected Results:

Eliminate waste and reduce environmental pollution

Domains of interest:

- human's waste
- Database Security
- Data analysis

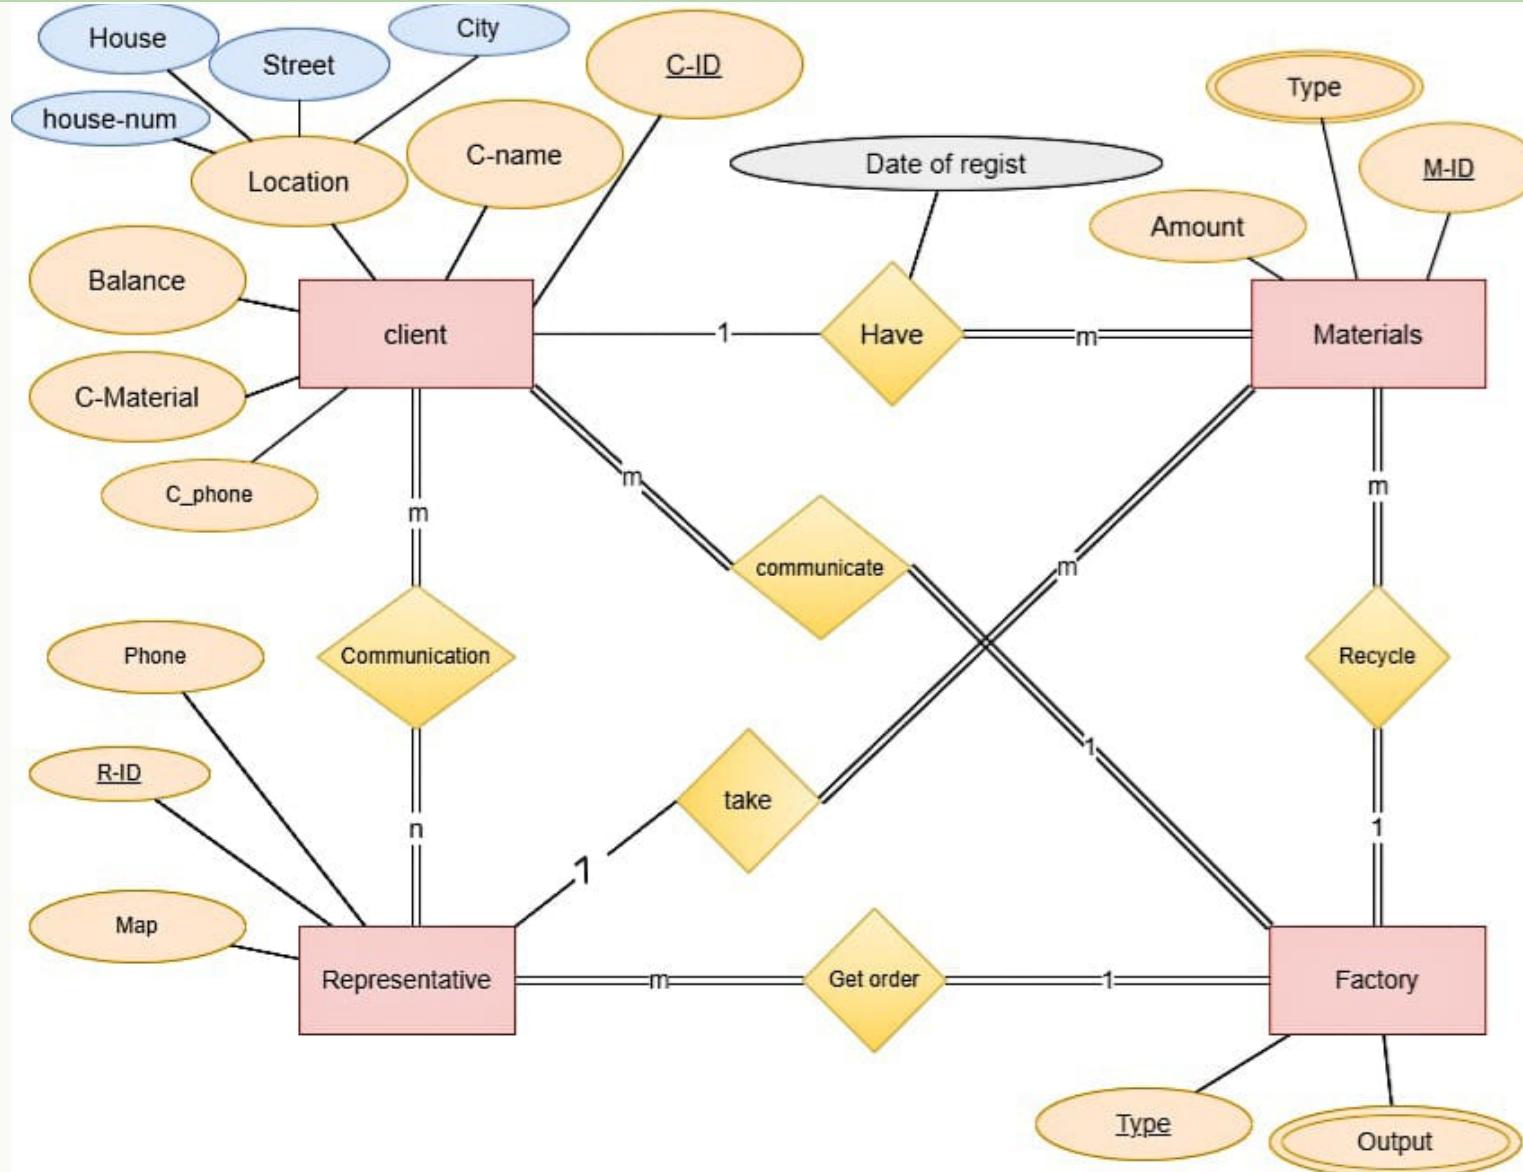

Methods& Tools Programming language:

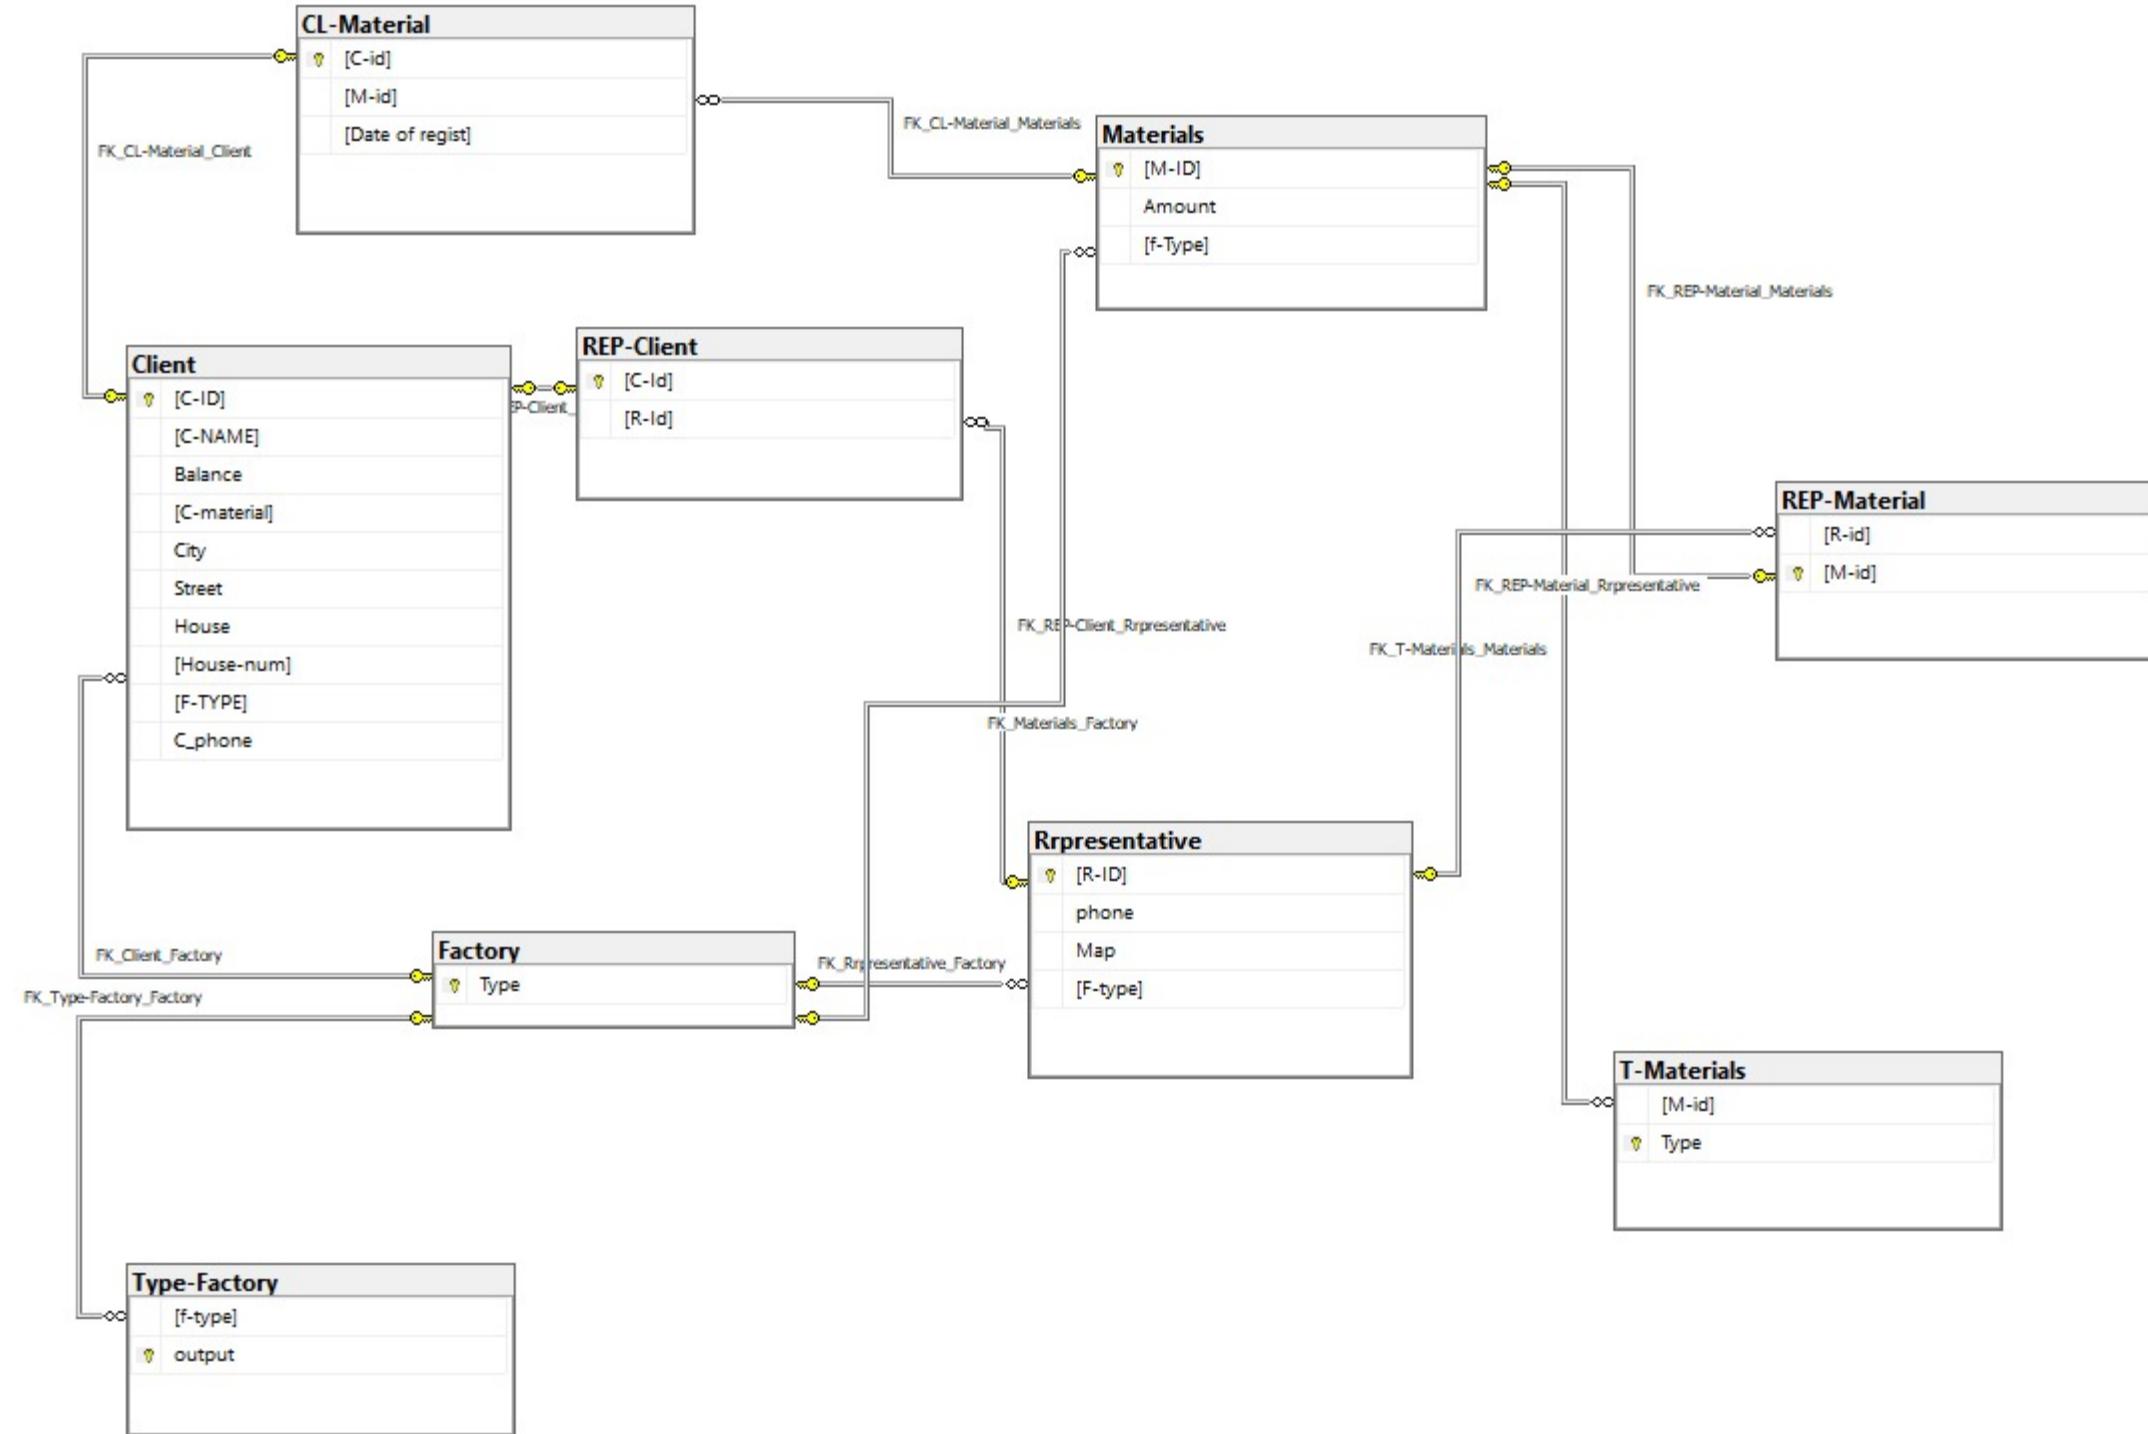

- Flutter development-
- based Dart Programming
- Language-firebase

Potential Beneficiaries (Customers):

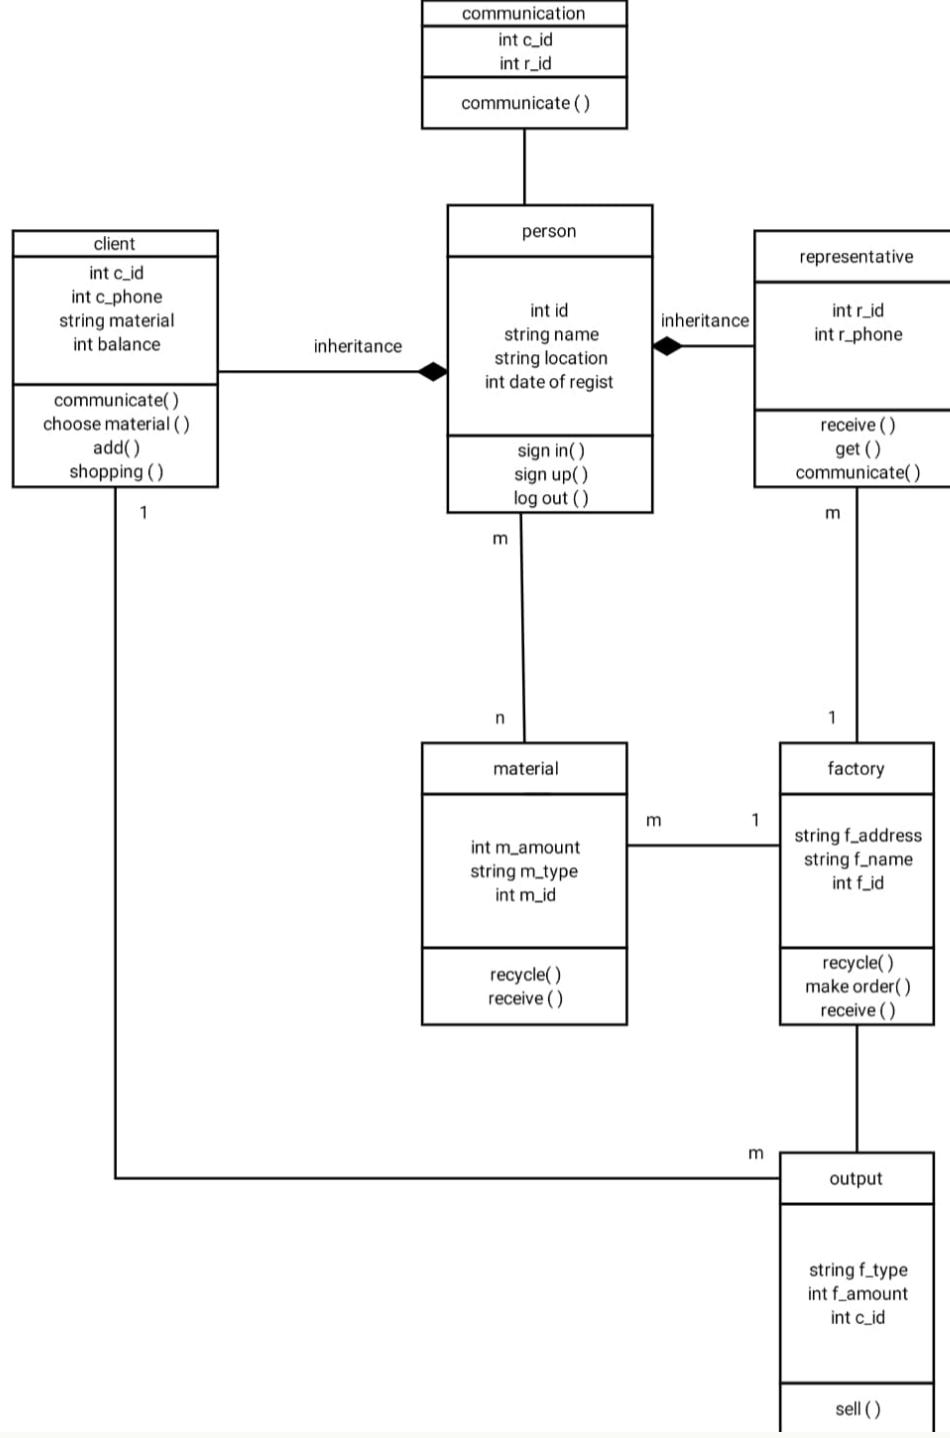

- common people
- Factories
